

# 0. If you are coming from Moodle

If you are coming from Moodle, please do not impose a Moodle-centric view of how an LMS should function, but be open-minded to different approaches. When we decided to create this LMS, we did not attempt to re-create Moodle and every part of it, otherwise, why not just use Moodle?

Our goal is to get about 80-90% of the functionality that almost every instructor uses in Moodle, while presenting it in a much more intuitive and easy-to-use manner. We also believe that by making more complex features more approachable, more instructors will feel comfortable using them. This does mean some features may not have made the cut - in which case, talk to us and we can discuss alternative methods of presenting the material.
